Capital Markets Review
As of June 30, 2014

Second Quarter Economic Environment

Key Economic Indicators

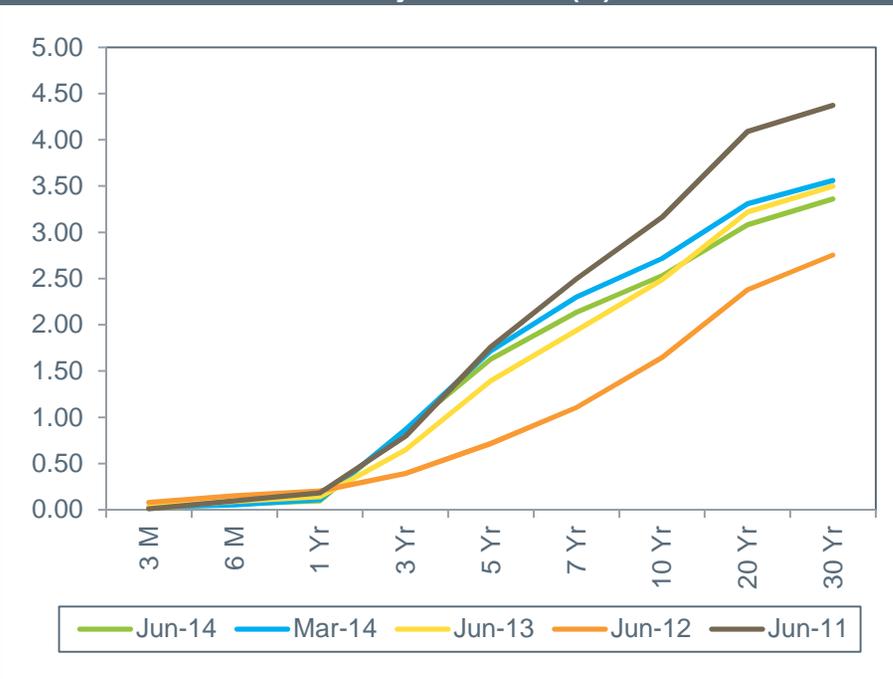

In the U.S., first quarter GDP growth was revised down to -2.9% and the IMF revised its 2014 U.S. growth forecast down to 2.0% from 2.8%, anticipating that the strengthening pace of recovery will only partially offset the first quarter's uninspiring performance. Following disappointing Q1 GDP numbers, recent data releases have indicated continued economic expansion and improving labor markets. In June, the economy added 288,000 jobs with the unemployment rate declining to 6.1%, the lowest rate since September 2008, while most inflation measures ticked up marginally. On the international front, the European Central Bank (ECB) announced several policy changes intended to increase liquidity for stressed banks and businesses. The benchmark policy rate was lowered by 10 basis points to 0.15%, bringing the interest rate on excess deposits to -0.10%. The negative rate requires banks to pay the ECB interest on excess reserves, which incentivizes banks to extend credit to the economy.

Domestic Equity Review
As of June 30, 2014

Second Quarter Review

Broad Market

U.S. Equities had a strong second quarter after an up and down first quarter. The Russell 3000 returned 4.87% for the quarter.

Market Cap

Large and mid-cap stocks significantly outperformed small-cap and micro-cap equities during the quarter.

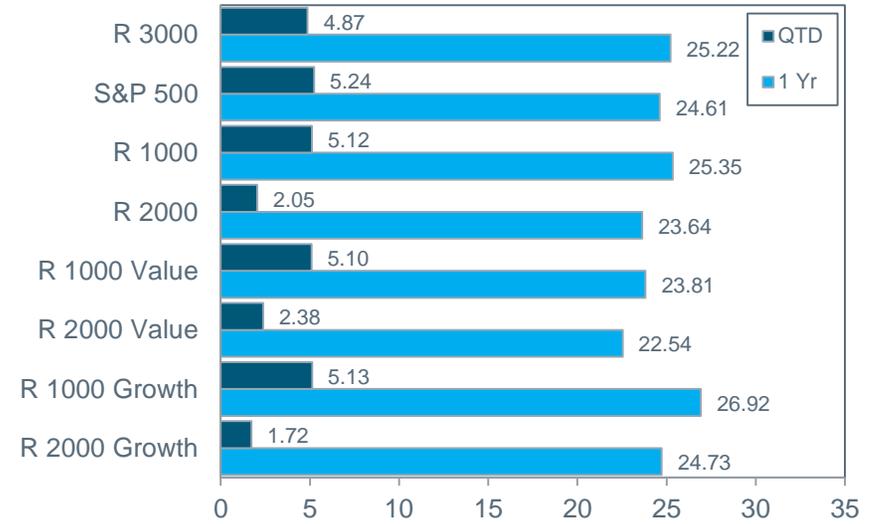

Style

While there was not much separation between value and growth stocks, value stocks edged out growth stocks by the end of the second quarter.

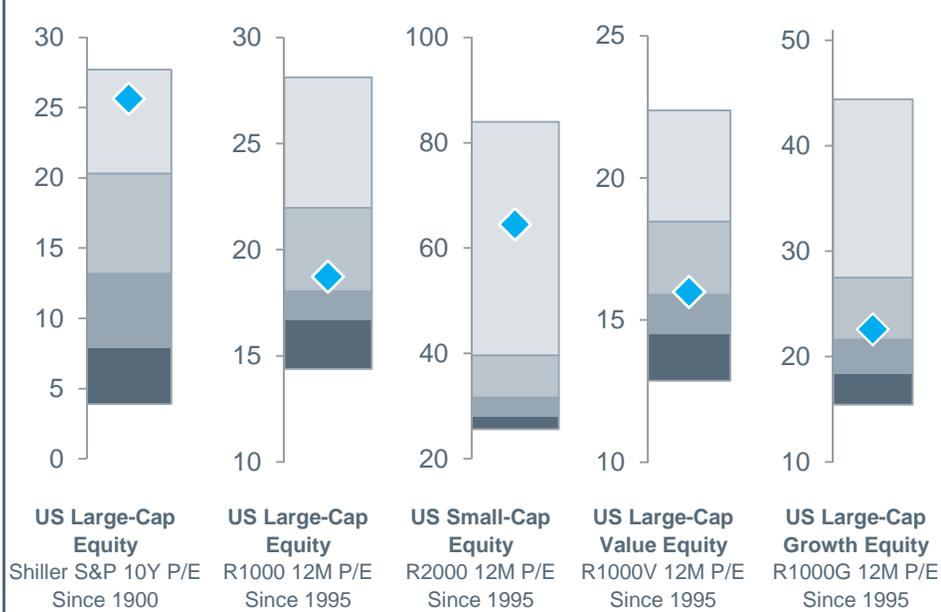

Sector

All major sectors had positive returns for the quarter, but the Energy sector, due to supply uncertainty, led all others in a strong quarter of equity performance. The Utilities sector also performed well, as it remains an attractive option for yield-oriented investors. In response to weak economic growth and low interest rates, many managers are positioning their portfolios to capture cyclical growth opportunities anticipated in the latter half of the year.

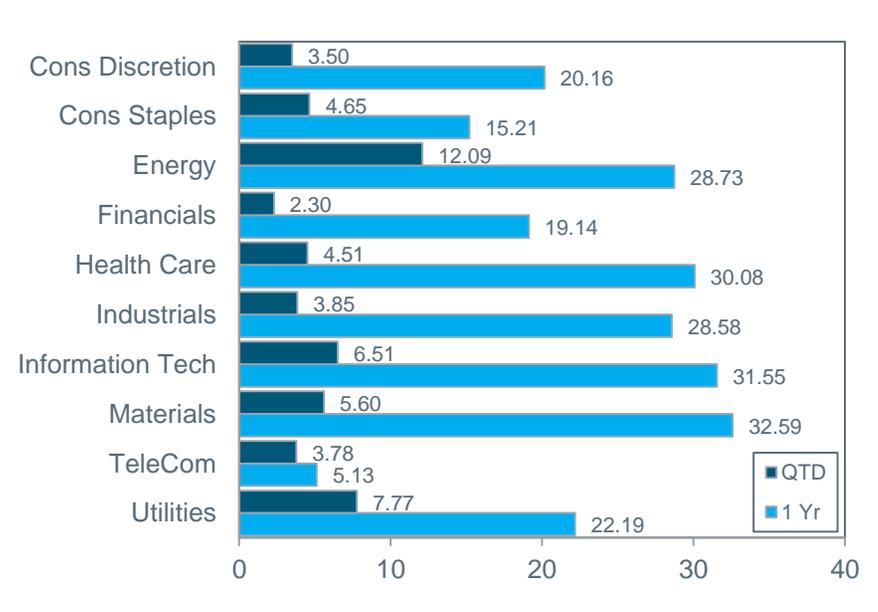

Style and Capitalization Market Performance

Valuations

S&P 500 Index Sector Performance

Valuation data courtesy of Bloomberg Professional Service and Robert J. Shiller, Irrational Exuberance, Second Edition. P/E metrics shown represent the 5th through 95th percentiles to minimize the effect of outliers.

International Equity Review
As of June 30, 2014

Second Quarter Review

Broad Market

International markets performed very comparably to U.S. markets during the second quarter. Returns for all major non-U.S. indices were positive in Q2.

Market Cap

In both developed and emerging markets, large-cap stocks drastically outperformed small-cap stocks.

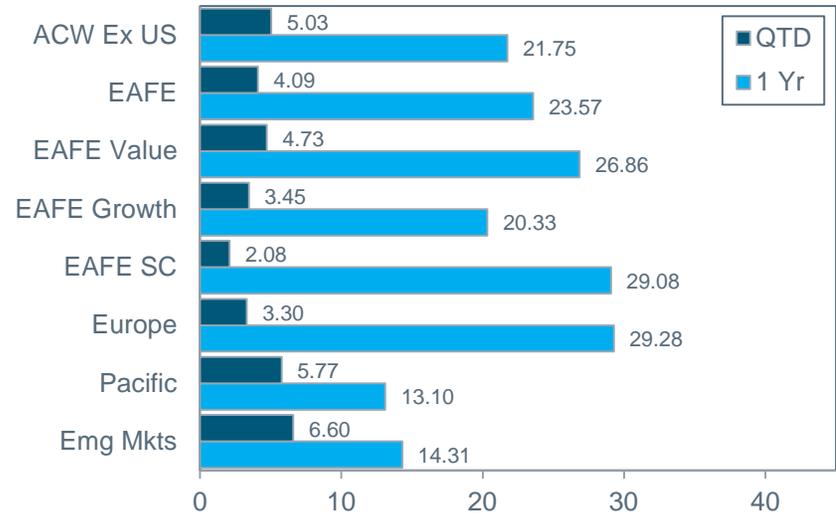

Developed Markets

The developed international markets generated strong absolute returns in Q2. Value continues to outperform growth over the short-term but still lags over longer time periods. Energy was the best performing sector this quarter while financials and information technology trailed the broad market.

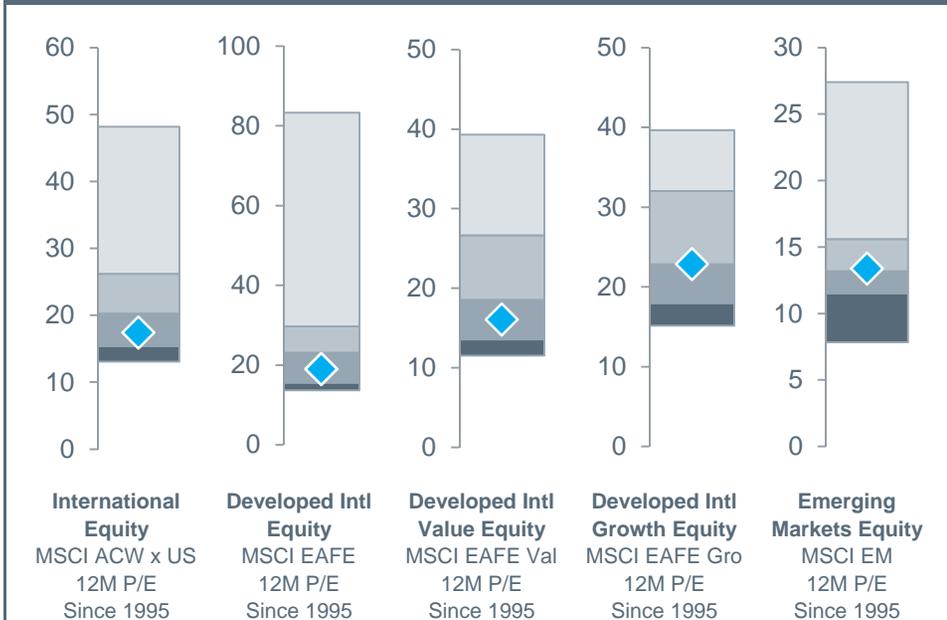

Emerging Markets

Emerging markets had a very strong quarter, outperforming both domestic and developed markets. Russia along with Eastern Europe weighed heavily on the MSCI Emerging Markets Index as turmoil in the Ukraine persisted. Concerns quickly dissipated in May with Russian stocks nearing double-digit returns for the quarter.

All returns are shown net of foreign taxes on dividends.

Fixed Income Review
As of June 30, 2014

Second Quarter Review

Broad Market

The Barclays US Aggregate index returned an unexpected 2.05% for the second quarter and brought the year-to-date return to 4.38%. This bump was unexpected due to the low yield environment in Q1 which had most investors believing the only direction yields could move was up.

US Treasury Market

US Treasuries gained 1.35% for the quarter and the US Treasury: Long index gained an impressive 12.14% year-to-date, outperforming each other fixed income index over the same time period.

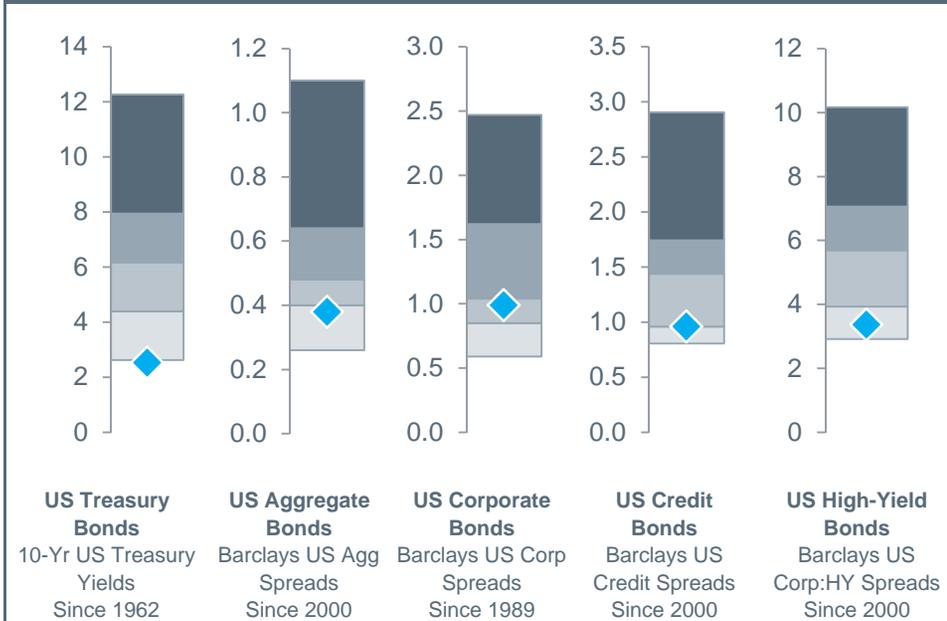

Investment Grade

The appetite for yield continued in Q2 as lower quality investment-grade securities (BBB) returned 3.43% for the quarter and 7.17% year-to-date compared to 1.23% and 2.37% for AAA securities, respectively.

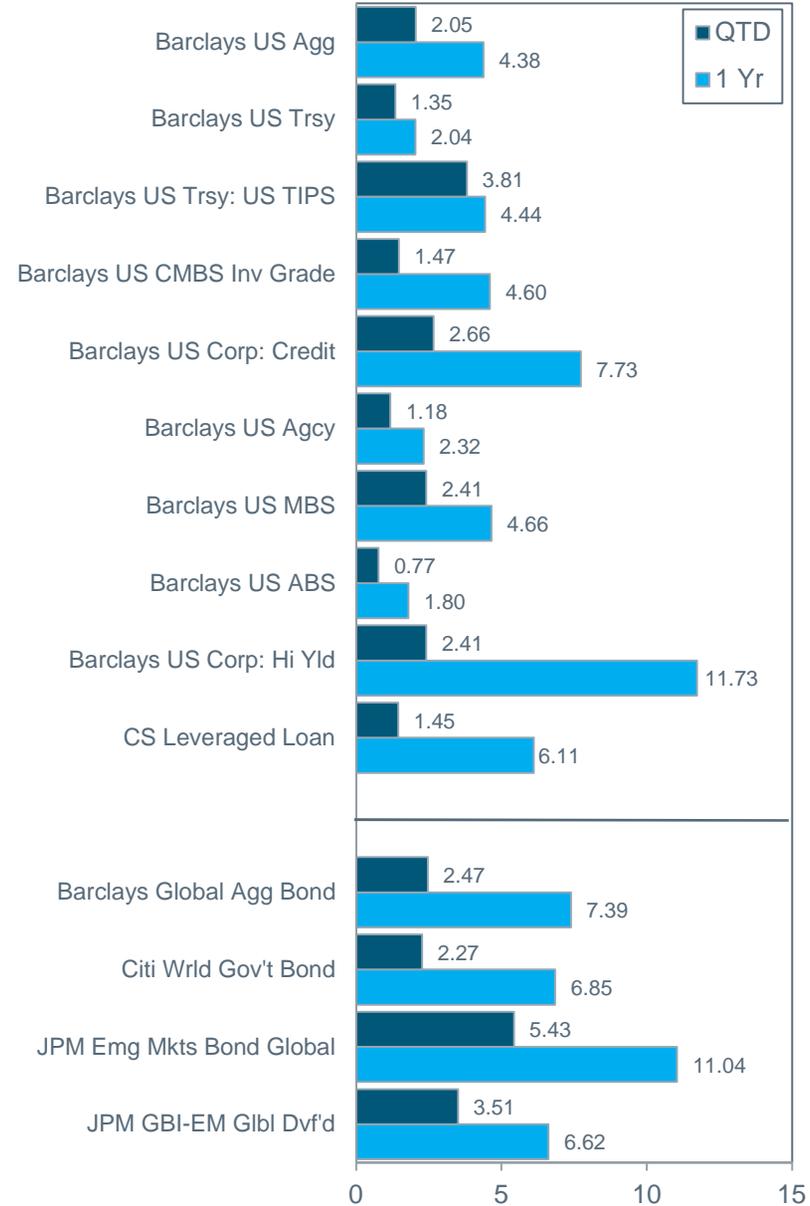

Non-Investment Grade

EMD returned 5.81% in Q2, a relief for investors who saw a large hit for this asset class in 2013. Improving return figures can be contributed to more compelling valuations in emerging countries after the sell-off in 2013.

Valuations

Fixed Income Performance

Valuations shown represent the 5th through 95th percentiles to minimize the effect of outliers.

Second Quarter Review - Absolute Return

General Market - Hedge Funds

Hedge funds were up broadly during the second quarter despite a difficult long/short equity environment in April. Multi-strategy funds of hedge funds were up from 1.0% to 2.5% in Q2, bringing the YTD return to 4%. Credit managers continued to perform well, benefiting from the positive carry associated with the strategy as well as marginally narrowing credit spreads. Managers were also able to capitalize on some idiosyncratic events in distressed, lower quality, and asset backed credits, helping to buoy returns.

General Market - Global Tactical Asset Allocation (GTAA)

Global Tactical Asset Allocation (GTAA) strategies posted positive results in the second quarter as most asset classes built upon gains from Q1. Risk parity strategies significantly outperformed others in the space, while those that follow a blended 60/40 index lagged those that are less benchmark constrained. Similarly, managers with allocations to REITs and energy equities also posted stronger performance in a trend reversal over the past twelve months.

Second Quarter Review - Real Assets

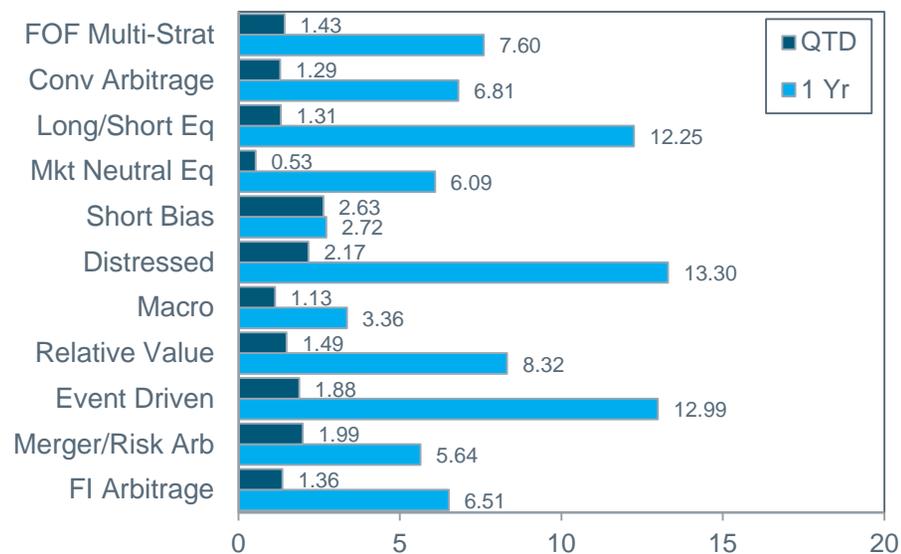

General Market - Diversified Inflation Strategies

Following a difficult 2013, the second quarter extended the welcome trend of strong performance in Diversified Inflation Strategies (DIS) that began in early 2014. DIS managers have rebounded through the first half of 2014 as several of the asset classes that previously dragged on results became additive to returns in Q2. REITs and MLPs provided the largest gains, and global natural resources equities contributed to the performance of several managers with long-standing strategic weights to the asset class.

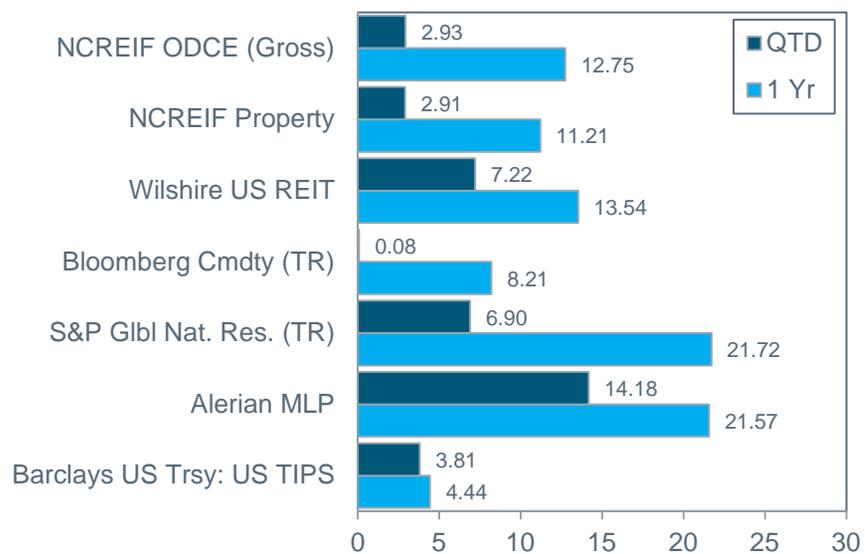

General Market - Real Estate

Core U.S. Real Estate continued to exhibit positive performance, as evidenced by preliminary returns between 2% and 3%. Publicly-traded real estate also continued to produce strong returns, as demonstrated by a 7.0% return in the FTSE NAREIT All Equity REITs Index. Noticeable growth in the office market has been driven by private sector job growth, particularly in areas with heavy concentration of technology and energy companies.

Miscellaneous Comments

- Performance shown is gross of fees, with the exception of the following:
 - **Funds 31, 36, 49:** Performance shown is net of fees.
 - **Funds 5 and 20:** Performance shown is net of fees, except for Total Fund performance.
- Performance shown is calculated using quarterly performance provided by participating public funds.
- Performance shown may differ from a fund's actual performance due to rounding.
- Performance shown for Fixed Income reflects US Fixed Income only, with the exception of the following:
 - **Funds 1, 4, 29, 64, 119, and 198:** Performance shown includes US and Non-US exposure.
- Net Assets Available for Benefit includes funding percentage valuation as of dates between December 2012 and December 2013.
- Allocations shown reflect dedicated managers/mandates rather than actual exposure.

Glossary of Terms

Beta - A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of a portfolio's non-diversifiable or systematic risk.

Return - Compounded rate of return for the period.

%Return - The time-weighted rate of return of a portfolio for a given period.

Sharpe Ratio - Represents the excess rate of return over the risk-free return (i.e., BofA ML 3 Mo US T-Bill Index), divided by the standard deviation of the excess return. The result is the absolute rate of return per unit of risk. The higher the value, the better the product's historical risk-adjusted performance.

Standard Deviation - A statistical measure of the range of a portfolio's performance. The variability of a return around its average return over a specified time period.

Calculation is based on quarterly periodicity.
